

Incognito™ Lingual Braces

Treatment Information for the Web

Discover a completely different way to wear braces

The way you smile tells people a lot about you, but if you're embarrassed about crooked teeth, you might feel the need to hide your smile, and that could be holding you back socially and professionally.

We understand how important your smile, and the way you look and feel, is to you. It is for this reason that we are dedicated to offering you specialist, highly innovative treatment solutions that can truly meet your needs from both a clinical and personal point of view – such as the revolutionary Incognito braces from 3M.

Incognito braces - the truly comfortable, hidden and effective way to straighten your smile

Incognito braces are fixed, custom-made braces that are fitted to the back of your teeth. Offering the best of both worlds, Incognito braces are able to straighten teeth in a comfortable, hidden way whilst providing highly effective, predictable and long-term results*.

Braces made just for you

Your smile is unique and so are you. Because no two people are alike, no two sets of Incognito braces are alike. Unlike other braces, Incognito braces are fully customised to the shape of your teeth and to your individual tooth alignment. Made using state-of-the-art CAD/CAM technology, the special custom-made arch wires and brackets are programmed with your unique treatment prescription to ensure efficient and effective tooth movement for your desired final smile.

What makes Incognito braces so special and unique?

- **Individualised for you** - because they're fully customised to the shape of your teeth with the precision of state-of-the-art computerised design and manufacture
- **Very low profile** - so they are less likely to interfere with your speech
- **Specifically contoured** - to hug the lingual (tongue side) surfaces of your teeth for optimal comfort, fit and performance because of their low profile bracket design
- **Effective** - because they work 24/7, even while you're sleeping
- **Short treatment time** - the custom-made wires and brackets of your Incognito braces are designed to minimise the amount of time your orthodontist needs to spend making adjustments, and mean we have maximum control in helping you achieve the desired new look of your smile
- **A brighter smile** - because any white marks that traditional front sided braces cause would be on the back of your teeth

Incognito™ Lite Lingual Braces

Treatment Information for the Web

A more beautiful smile is only months away!

Maybe you had thought about getting treatment, but who wants to spend years with those ugly conventional metal braces? Now, with the Incognito Lite brace you can have beautiful, straight front teeth in as little as five months depending on your treatment needs.

Incognito Lite braces - the truly comfortable, invisible and effective way to straighten your smile – and a quick, cost effective treatment option!

Now, with the new Incognito Lite braces, we can also offer you all of the benefits of the full arch Incognito braces, but with the added benefits of a quicker and cheaper treatment option.

How do Incognito Lite braces work?

While original Incognito braces attaches invisibly to the back of all of your teeth, the Incognito Lite brace is strategically designed to work on only the front six teeth, top or bottom, that need straightening. Ideal for patients who need re-alignment just in this area, this highly targeted approach means not only a hidden, highly effective experience, but a quick and cost-effective one as well.

Reasons to smile about Incognito Lite braces:

- **Hidden** - because they're bonded to the back of your teeth
- **Comfortable** - because of their low profile bracket design
- **Effective** - because they work 24/7, even while you're sleeping
- **Individualised for you** - because they're fully customised to the shape of your teeth with the precision of state-of-the-art computerised design and manufacture
- **Quick to put on** - because they're on fewer teeth and use specialised wires that are easy and quick to work with, so you spend less time in the treatment chair
- **Short treatment time** - because of their successful, proven technology, you can see results within five months depending on your treatment need
- **A brighter smile** - because any white marks that traditional front sided braces cause would be on the back of your teeth
- **Hypo-allergenic** - because they're made from gold alloy, not nickel
- **Easy to clean** - because they're easily accessible
- **Affordable** - (compared with full arch brace) because you only pay for treating the front six teeth that specifically need fixing, not all thirty-two
